Function Introduction

How does Cavitation works?

The Ultrasonic Cavitation machine uses sound waves/frequencies to disrupt the fat cell walls, which causes the fat cells to "leak" their contents into the fluid spaces of your body. From there, your lymph system picks up this waste material (the loose fat) and begins circulating it through your body until it can be processed by the liver and eliminated with sweat, urine and feces.

How does RF works?

The multi-polar radio frequency causes a hot reaction in the tissue which stimulates the body's natural healing response causing new collagen to form, and the production of new elastin fibres making skin to look and feel firmer. Skin is heated consistently and uniformly without the risk of any burns.

How does Vacuum works?

After break up the subcutaneous fat, decrease cellulite accumulation. It helps smooth lymph and discharges the fatty acid and toxin that is decomposed through lymph system. Vacuum heads immediate effect in body shaping.
